

## Project Sprint Retrospective Notes

Team: Team 12 Bin Chickens

Sprint: 0

Date: 14/08/22

Attended: Amy Minitier, Luke Mullan, Joseph Jermaine Jamisola, Syed Ali, Abdulrahman Alanazi

Scrum Master: Amy Minitier

Product Owner: Prakash Adhikari

Development team: Luke Mullan, Joseph Jermaine Jamisola, Syed Ali, Abdulrahman Alanazi

### 1. Things That Went Well

Team communication has been excellent. Everyone within the team has contributed and is engaged in the sprint.

All members are saving their current work on our shared teams space.

### 2. Things That Could Have Gone Better

Due dates for teamwork weren't clarified during last project meeting and as such actionable items weren't completed before the next team meeting.

Product owner needs to provide more requirements for the sprint so we can understand the product and scope of the project better.

### 3. Things That Surprised Us

Product owner didn't provide enough information on the product and project.

Addition of API functionality was unexpected.

Very narrow focus of sprint 1 compared to size of entire project.

### 4. Lessons Learned

How to use Jira

Importance of communicating with the product owner

Flexibility to adapt and change to unknown requirements

Learnt to stick to the specification closely and not add user stories that are out of the scope

Fibonacci numbers 😊

Number of user stories within a sprint are fewer than we initially thought.

## **5. Final Thoughts**

Ready to tackle the ongoing unexpected changing requirements.
